

Question: Compare total revenue in “Financials” sector between Year 1 and Year 4

Here are box plots representing the distribution of each company's revenue in 2 years 2012 and 2015, regarding Financials as criterion sector.

Overall, total revenue in year 1 is more than year 4 ($\$878.187.750.000 > \$843.303.463.000$). There are 41 companies that involve Financials. Most companies earn more in year 1 (the third quartile is higher than year 4), and the most profitable one earns more than \$100 billion, while in year 4 it only earns \$93 billion.

However, in year 4, the minimum value is higher, the range and standard deviation is lower. This means companies in year 4 are more stable and earn a more predictable amount of profit, since the range is narrowed down.
